Rapid Deployment Repeater System

System Includes: BK Radio Plug-and-Play repeater and wall charger in a weatherproof case.

In any emergency, the faster reliable communication is established the better. The self-contained RELM/BK Radio rapid deployment repeater system is designed to help first responders and incident command teams achieve that objective. With Plug-and-Play simplicity any two BK Radio portables, including the P25 compliant DPHx, are easily accommodated to generate digital, analog or cross-mode interoperability in a few short minutes.

When coupled with the optional solar panel and the most energy efficient P25 portable in the market this user-friendly package can operate as a stand-alone system for an extended period of time.

Other options include cigarette lighter adapter and a Plug-and-Play mobile radio link allowing increased RF output up to 100 Watts.

This suitcase-style repeater system is offered with or without radios to accommodate customer requirements.

Optional Equipment

| | |
|-------------------------|-------------------------|
| Antenna | |
| 8' Tripod Antenna Mount | |
| 20W Solar Panel | |
